

**THERE IS
MORE AT
STAKE THAN
THE BARN.**

Make the switch to fire safety:

1. Do not allow smoking in or around barns or near any flammable farm materials.
2. Situate manure piles at least 10 meters away from barns to reduce the chance of combustion.
3. Ensure hay and straw are properly dried before storing it in the barn.
4. Keep dust and cobwebs to a minimum
5. Regularly check all appliances, wiring, electrical equipment and heat-producing materials and equipment to ensure everything is in safe, working order.
6. Repair/replace any frayed or damaged wiring as soon as it is identified.
7. Never refuel engines inside a building or while the engine is running or hot.
8. Extension cords should only be used temporarily and should be removed after use.
